The Common — Business Profile, Team, Events and Listings: Developer Brief

Oct 14, 2026 · @David Morris

This brief covers upgrades to the Edit profile and Team and settings cards on My Business Profile, plus two new cards, Events and Listings. Every change follows the platform's approval, roles and audit rules, so nothing here bypasses them.

1. Summary, scope and how it ties in

What changes

Card	Changes
Edit profile	Logo upload with auto-resize; a clickable "Profile % complete" link; hero image (still only) and carousel (pictures and videos); reel and social links explainer; opening hours Save button; hide empty contact details; chat and booking toggles
Team and settings	Team overview with roles, edit and remove; add staff by My ID QR or user ID
Events (new)	Event list with search, create event, ticket sales, RSVPs and attendees, event staff and roles, ticket scanning, event messages
Listings (new)	Searchable listings, pending approvals, listing messages

How it ties into what we already specified

- **Moderation and approvals:** edits to the public profile follow the submit, review, approve or decline flow in the moderation spec. The live version stays visible until a new version is approved, and a decline sends the owner a reason.
- **Audit log:** every action in this brief writes to the shared append-only audit log, searchable by user ID and date and exportable to CSV (section 8).
- **Roles and permissions:** business roles (owner, manager, staff) and event staff roles are enforced on the server, not only hidden in the app (section 2).

- **Ticketing:** event staff, the My ID QR code, door operator scanning and ENTER or DECLINED results reuse the ticketing spec.
- **18+ policy:** only adult accounts can be added as team members or event staff.

Suggested publish rule for each field (decision needed)

Field	Rule	Why
Business name, description	Needs approval	Material public wording
Logo, hero image, carousel pictures and videos	Needs approval	Image and video screening plus human review
Reel link, social links	Needs approval	Links are a common scam route
Address, phone, email	Needs approval	Material, and open to abuse
Opening hours and special opening times	Live on Save, logged, auto-screened	Low risk and time-sensitive
Chat and booking toggles	Live at once, logged	Settings, not content
Team changes	Live at once, logged; the invitee must accept	Access control, not content
Events and listings	Needs approval (existing moderation flow)	Public marketplace content
Messages	Not pre-approved; auto-screened and reportable	Private conversations

How a pending change behaves

- The Save button on an approval field reads **Submit for approval**, and the card shows a "Pending review" badge.
- The public page keeps showing the previous version until approval.
- If it is declined, the owner sees the reason code and written explanation, with the declined version kept as a draft to edit and resubmit.
- Preview public profile shows the pending version to the owner only, marked "Preview of pending changes".

2. Roles and permissions

There are two layers: a **business role** for the whole business, and an **event role** for one event. A person can hold both, and each is checked on the server.

Business roles

Action	Business owner	Manager	Staff
View the profile, events, listings and team	Yes	Yes	Yes (view only)
Edit the profile (name, description, logo, media, hours, contact, social)	Yes	Yes	No
Change chat and booking toggles	Yes	Yes	No
Add, edit or remove Staff	Yes	Yes	No
Add, edit or remove Managers	Yes	No	No
Create and edit events and listings	Yes	Yes	No
Appoint and manage event staff, open the scanner, see the live count	Yes	Yes	Only through an event role
View ticket sales and statistics	Yes	Yes (no payout details)	No
Stripe and payout settings	Yes	No	No
Answer chat, event and listing messages, and bookings	Yes	Yes	Yes

Rules

1. Each business has one owner. The owner cannot be removed or demoted inside the app. Changing the owner is done by the super user after an identity check, and is logged.
2. A person can never change their own role, and a manager cannot edit another manager.
3. Only adult accounts that have made the 18+ declaration can be added. Suspended accounts lose access at once.

4. A platform admin can edit a profile on the owner's behalf only with a written reason. The edit is logged and the owner is notified.
5. The business role alone does not let Staff scan tickets. Staff need an event role (below).

Event staff roles

These match the roles in the ticketing spec, with two new label roles. A person can hold several roles at the same time.

Role in this brief	Ticketing spec role	What it allows
Door access	Door operator	Open the ticket scanner, scan tickets, look up tickets, manual check-in with a reason, see the live count
Event management	Event manager	Edit event details (still subject to approval), manage ticket tier visibility, view ticket statistics without fees, see the attendee list
Event security	Steward	See the live count and capacity alerts, report incidents. Cannot scan
First aid	First aider (new)	Listed as the first aid contact, report incidents, see the live count. Cannot scan
Entertainment	Entertainer (new)	Listed on the event team and sees the event details. No other permissions

Only Door access (and the business owner or manager) can scan tickets. The server checks the role, the event and the valid dates on every scan.

Decision needed: keep the three other ticketing spec roles (live count viewer, box office, stats viewer) as extras, or drop them to keep the list to the five you named.

3. Edit profile card, part 1

3.1 Business name and description

These stay as they are, with a character counter (suggested limits: name 60, description 1,000) and the Submit for approval behaviour from section 1.

3.2 Business logo (new, directly below name and description)

The owner or manager can add, change or remove the business logo. The logo is never cropped, and it always sits on a clear (transparent) background.

What the owner sees

- A "Business logo" block showing the current logo on a light panel, with **Add logo** (or **Change logo**) and **Remove** buttons.
- Helper text with the recommended size: "Use a PNG with a transparent background, 1024 × 1024 px (minimum 512 × 512 px), up to 5 MB."
- A preview of how the logo will look in the profile header, in a list card and on an event card, shown before Submit.

Upload rules

Item	Rule
File types	PNG (preferred), WebP, JPG. No SVG or animated files in release 1 (security)
Size	Recommended 1024 × 1024 px, minimum 512 × 512 px, maximum 5 MB. Anything under 256 px is rejected with a clear message
Auto-resize	The server trims empty borders, scales the logo to fit inside a 1024 × 1024 px transparent square with about 8% padding, keeping its proportions. It is never cropped and never stretched. A wide 3:1 logo stays whole and is centred
Clear background	The result is saved as a transparent PNG. If the upload has a plain white or flat colour background, offer "Remove plain background" with a before and after preview. The owner can decline
Sizes created	1024, 512, 256 and 128 px, served from the CDN
Safety	Check the file by its content, strip metadata, scan for malware, run image screening. The original is stored privately
Alt text	Defaults to the business name, editable

Item	Rule
Approval	A new or changed logo goes to the moderation queue. The old logo stays live until approval

Fix needed now: the logo on the current business profile is cut off at both edges ("COMMON" shows as "OMMO"). Show every logo with a contain fit, never a cover fit.

3.3 "Profile % complete" becomes a link

- Tapping **Profile 90% complete** at the top of the page opens Edit profile, expands the first section with something missing, scrolls to the first missing field and highlights it for a few seconds.
- Ten items count 10% each, checked in this order: name, description, logo, hero image, carousel (3 or more items), opening hours, address, contact (phone or email), social links or reel, customer connections chosen.
- Items waiting for approval count as complete. At 100% the pill reads "Profile complete" and is not a link.
- Each field has a stable anchor so the link can go straight to it.

3.4 Pictures and videos

Hero image (one only, still picture)

- Accepts JPG, PNG and WebP only. A video file is refused with: "The hero must be a still picture. Add videos to Carousel media below."
- Recommended 1600 × 900 px (16:9), minimum 1200 × 675 px, maximum 10 MB.
- The system crops to 16:9 around a focus point the owner can drag, never stretches, and creates 1600, 800 and 400 px wide versions.

Carousel media (rename the section from "Carousel" and add the description "Pictures and videos shown in a swipeable gallery on your profile")

- Up to 10 items, reorderable by drag. Pictures follow the hero rules.
- **Videos:** MP4 or MOV, up to 60 seconds and 100 MB, at least 720p. The system converts each video to H.264 MP4 at up to 1080p, creates a poster frame, and streams it in adaptive quality. Portrait or square videos are shown inside the 16:9 frame on a blurred background so nobody is cropped out. Playback starts muted with tap to unmute.
- Each item shows a status: Uploading, Processing, Pending approval, Live, or Declined with the reason.

- Alt text is required for pictures and a caption is optional for videos.
- Uploads run in the background so the owner can keep editing.

Safety and cost controls

- Every new picture or video is auto-screened and then reviewed by a moderator before going live. Reviewers can play the video and see sampled frames.
- Check files by content, remove metadata including GPS, and scan for malware.
- Suggested cap of 500 MB of media per business, set by the super user.

4. Edit profile card, part 2

4.1 Social media and reel

Add this explainer at the top of the Social media section: "Your reel appears on your public profile above your Promotions. Your social media links appear at the bottom of your profile." Show a small labelled page sketch beside it with the reel marked above Promotions and the social links marked at the bottom.

- **Reel link:** one URL from Instagram Reels, TikTok or YouTube Shorts.
- **Social links:** Facebook, Instagram, TikTok, X, YouTube, LinkedIn and website, one field each.
- **Validation:** HTTPS only, domain must match the platform, no shortened links, with a preview of what visitors will see before submitting.
- **Showing the reel:** use the platform's official embed, but load it only after the visitor taps play, so no third-party cookies load without consent. If the reel is deleted or unavailable, hide it.
- Links need approval (section 1). An empty field shows nothing on the public page.

4.2 Opening hours

- **Save opening hours** button at the bottom of the section. It stays disabled until something changes, shows Saving, then "Opening hours saved and live". A banner warns "You have unsaved changes" if the owner tries to leave.
- **Weekly hours:** for each day, open and close times, more than one slot per day (for example a lunch break), a Closed switch, a 24 hours switch and **Copy to other days**.

- **Special opening times:** a date or a date range, a label (for example "Christmas Day"), and either Closed or custom hours. Special times override weekly hours on those dates. Past special dates move to a Past list and can be cleared.
- **Validation:** closing after opening, no overlapping slots, no new special dates in the past. All times are UK time.
- **Public page:** shows the week, a live "Open now" or "Closed, opens at 09:00" status worked out on the server, and any special times. The section is hidden if no hours exist.
- **Publishing:** hours go live on Save (section 1), with before and after written to the audit log.

4.3 Address and contact

- Remove the wording "Not listed in this preview" everywhere, including the edit screen, the owner preview and the public page.
- If a detail is not provided, leave the field blank in the edit form and show **nothing** on the public page: no label, no icon, no placeholder. This covers phone, email, website and address.
- The Call, Email and Directions buttons and the map appear only when the matching detail exists. If there are no contact details at all, hide the whole section.
- **Suggestion:** a switch "Show area only (for example Clapham) instead of my full address" for home-based businesses.
- Validate UK phone numbers and email addresses. Show email as a button, not as plain text, to limit scraping.
- Changes need approval (section 1).

4.4 Customer connections

Two switches (sliders) under Customer connections:

Switch	When off	When on
Allow customers to chat with your business	The Message button is hidden. Existing conversations stay readable but cannot receive new messages	Members can start a chat. Messages arrive in the business inbox

Switch	When off	When on
Allow bookings and appointments	The Book button is hidden. Existing bookings stay active, with a warning such as "You have 3 upcoming bookings; they will stay active"	Members can request a booking or appointment

- Changes apply at once, are limited to the owner and managers, and are logged.
- **Suggested default:** both off for new businesses, so the owner opts in.
- **Chat safety:** only adult members can message. Every message has a Report button, messages are auto-screened for scams, links and abuse, and flagged ones go to moderation or safeguarding. Owners can block a member from messaging.

4.5 Proposed public profile page order

Sections with no content are hidden. Please confirm the order.

1. Hero image
2. Logo, business name, category, area and status
3. Action buttons: Message, Book, Call, Directions (only those that apply)
4. Description
5. Carousel media
6. **Reel** (above Promotions)
7. Promotions
8. Opening hours
9. Address and contact with map
10. Events and listings from this business
11. Reviews
12. **Social media links** (at the bottom)

5. Team and settings card

The card gains a team overview and a way to add staff by QR code or user ID. Existing settings stay as they are.

Team overview

- A card for each person: photo, display name, **username**, a role chip (Business owner, Manager or Staff), a status (Active or Invited), and **Edit** and **Remove** buttons.
- Only three roles exist at this stage: Business owner, Manager and Staff. Permissions are in section 2.
- The owner row shows no Remove button. Staff see the list but no Edit or Remove buttons. Managers can edit or remove Staff only.
- **Edit** opens a sheet to change the role. **Remove** opens a confirm dialog: "{Name} will lose access straight away." It also asks "Remove from this business's event teams too?", set to Yes by default.

Add member of staff (button at the bottom of the card)

The button opens a sheet with two options:

1. **QR code:** opens the phone camera to scan the QR code on the person's **My ID** screen in their profile. This is the same My ID code used for event staff in the ticketing spec. It carries a signed token for the user ID only, and expires after 5 minutes.
2. **User ID:** a text field where the owner types the person's user ID.

Both routes then follow the same steps:

1. The app shows a confirm card with the person's display name, username and picture only. No email or phone number.
2. The owner or manager picks a role (only the owner can pick Manager).
3. Tapping **Send invitation** creates the invitation. The person is notified and must tap **Accept** before they get any access. Until then the status is Invited.
4. Invitations expire after 7 days. The owner or manager can resend or cancel them.

Blocked cases, with plain messages: user not found, already on the team, and "This member can't be added" (used for suspended accounts or accounts without the 18+ declaration, without saying which). Suggested maximum team size: 25.

Other rules

- A person can belong to more than one business, and sees each under their own profile.
- Removing a person closes their open sessions for that business, including any open ticket scanner.
- A platform admin can see any business's team and remove a person with a reason (for example after abuse). The owner is notified.
- Rate limit My ID resolves and user ID look-ups to stop people guessing IDs.

6. Events card (new)

A new **Events** card on My Business Profile. It opens as a dropdown with the event list at the top, and each event opens into its own sections. It sits on the event organisation page described in the ticketing spec.

Event list

- Shows a headline only: the event name, with a small status chip (Draft, Pending approval, Published, Declined, Cancelled). Tapping a name opens the full event view.
- A **search** field finds events by name. Suggested extras: filter chips for Upcoming (default), Past and All.
- **Past events are greyed out.** They stay open for viewing, and their ticket sales, attendees and messages stay readable. The scanner closes when the entry window ends.
- A **Create event** button opens the event form. A new event goes to moderation before it can go on sale.

Sections inside each event

1. **Ticket sales:** per event, using the ticketing statistics endpoints, so figures match every other dashboard. Shows capacity, sold, remaining by tier, gross sales and, for owners and managers, fees and net.
2. **RSVPs and attendees:** a searchable list of RSVPs (free events) and ticket holders: display name, ticket tier and a status (RSVP, Valid, Checked in, Transferred, Refunded). It shows counts at the top and a CSV export for owners and managers. No email or phone numbers are shown. The organiser contacts people through event messages.
3. **Event staff:** add, edit and delete staff with the same My ID QR scan used in the Team card, then give each person one or more of the five roles in section 2. Staff must accept the appointment. Default valid dates run from 2 hours before the start to 2 hours after the end.
4. **Ticket scanning:** opens the scanner on the phone. Only people with the Door access role (and the owner or manager) can open it. A valid ticket fills the screen in giant green letters, **ENTER**, and any other result fills it in giant red letters, **DECLINED**, with the reason beneath. The header shows a live count of people entered. Full rules are in the ticketing spec. (You wrote "allow"; the spec uses ENTER so staff never mistake it for a different message. Please confirm the word.)

5. **Event messages:** a filtered view of the business inbox with only messages from the public about this event. Searchable by date (and suggested: by sender name or keyword), with unread counts, reply, and a Mark handled action. Messages are auto-screened and can be reported.

Who can do what

Action	Owner	Manager	Staff	Door access	Event management	Security and first aid	Entertainment
See the event in the list	Yes	Yes	View only	Assigned event	Assigned event	Assigned event	Assigned event
Create or edit the event	Yes	Yes	No	No	Edit details (needs approval)	No	No
Ticket sales	Yes	Yes (no payouts)	No	No	Yes (no fees)	No	No
RSVPs and attendees	Yes	Yes	No	Door look-up only	Yes	No	No
Add or remove event staff	Yes	Yes	No	No	No	No	No
Scan tickets	Yes	Yes	No	Yes	No	No	No
Live count	Yes	Yes	No	Yes	Yes	Yes	No
Event messages	Yes	Yes	Yes	No	Yes	No	No

A person's rights are the combination of their business role and all their event roles. The server checks every request.

7. Listings card and messages (new)

A new **Listings** card covers the business's marketplace listings. It opens as a dropdown with three sections.

1. **My listings:** a list showing a headline only, the listing name, with a status chip (Draft, Pending approval, Live, Declined, Expired, Sold or Closed). Tapping a name opens the listing. A search field finds listings by **name or date** (a date picker for the date the

listing was created or published). Suggested: a **Create listing** button at the top, which opens the existing listing form.

2. **Pending approvals:** every listing, and every edit to a live listing, waiting for moderation. Each row shows the name, the type (new or edit), when it was submitted and how long it has waited. Declined items show the moderator's reason, with **Edit and resubmit**. This list is read-only for the owner and reflects the admin desk queue.
3. **Listing messages:** a filtered view of the business inbox with only messages about the business's listings. Rows show the listing name, the sender's display name, a preview and the date. It is searchable by **date** (suggested: also by listing name and keyword), shows unread counts, and allows reply and Mark handled.

Rules shared by all business messages (chat, event messages, listing messages)

- There is one inbox. Events and Listings show filtered views of it, so a message is never in two places.
- Only adult members can message. Every message has a **Report** button and a **Block member** option.
- Messages are auto-screened for scams, links and abuse. Flagged messages go to moderation, and serious ones to safeguarding, as in the moderation spec.
- Owner, Manager and Staff can answer messages. Event management can answer event messages for their event.
- Message content is private to the sender, the business and moderators, and is retained according to the retention schedule.
- The audit log records who replied, marked handled or exported, but does not log every time a message is opened.

Who can do what for listings

Action	Owner	Manager	Staff
See listings and pending approvals	Yes	Yes	View only
Create or edit listings	Yes	Yes	No
Reply to listing messages	Yes	Yes	Yes

8. Audit logging

All actions below write to the shared append-only audit log, with actor user ID, role at the time (business role and any event role), entity, business ID, event ID where relevant, before and after values, reason, outcome, IP address and time. Admin and super user search it by user ID and date and export it to CSV, as in the audit logging spec.

Area	Events logged
Profile text	PROFILE_SUBMITTED, PROFILE_APPROVED, PROFILE_DECLINED, with before and after of name and description
Logo and media	LOGO_UPLOADED, LOGO_REMOVED, HERO_CHANGED, MEDIA_ADDED, MEDIA_REMOVED, MEDIA_REORDERED, MEDIA_PROCESSING_FAILED
Links	REEL_LINK_CHANGED, SOCIAL_LINKS_CHANGED
Opening hours	HOURS_SAVED, SPECIAL_HOURS_ADDED, SPECIAL_HOURS_REMOVED, with before and after
Contact	CONTACT_CHANGED, ADDRESS_CHANGED, with before and after
Customer connections	CHAT_ENABLED, CHAT_DISABLED, BOOKINGS_ENABLED, BOOKINGS_DISABLED
Team	TEAM_INVITED, TEAM_ACCEPTED, TEAM_DECLINED, TEAM_ROLE_CHANGED, TEAM_REMOVED, TEAM_INVITE_CANCELLED, MY_ID_QR_RESOLVED
Events	EVENT_CREATED, EVENT_EDITED, EVENT_SUBMITTED, EVENT_APPROVED, EVENT_DECLINED, EVENT_CANCELLED, plus the ticket events in the ticketing spec
Event staff	STAFF_INVITED, STAFF_ACCEPTED, STAFF_ROLES_CHANGED, STAFF_REMOVED

Area	Events logged
Attendees	ATTENDEE_LIST_VIEWED, ATTENDEE_LIST_EXPORTED
Listings	LISTING_CREATED, LISTING_EDITED, LISTING_SUBMITTED, LISTING_APPROVED, LISTING_DECLINED, LISTING_CLOSED
Messages	MESSAGE_SENT, MESSAGE_REPLIED, MESSAGE_MARKED_HANDLED, MESSAGE_REPORTED, MEMBER_BLOCKED
Admin actions	PROFILE_EDITED_BY_ADMIN (with reason), TEAM_MEMBER_REMOVED_BY_ADMIN

Rules

- Log failed and refused actions too, for example a Staff member trying to edit the profile, with the outcome Refused.
- Never store file contents, message bodies or full phone and email values in the log. Store a reference, and masked values for contact changes.
- A person who is removed keeps their history in the log.

Suggestion: Activity view for owners. An optional read-only **Activity** list in Team and settings, showing the last 90 days of profile, team and event changes for that business (who, what, when), with no IP addresses. This helps owners spot mistakes and lets them see declined or approved changes.

9. API endpoints

REST and JSON under `/api/v1`. Each endpoint checks the business role (and event role where relevant) on the server, writes an audit entry for every change, and returns `403` on a role failure. Changes to approval fields create a new version in the moderation queue.

Profile

Method and path	Roles	Purpose
GET /businesses/{id}/profile	Owner, manager, staff	Profile, pending versions, completeness
GET /businesses/{id}/profile/completeness	Owner, manager	Items, percent and the first missing field
PATCH /businesses/{id}/profile	Owner, manager	Name, description, address, contact (creates a pending version)
POST /businesses/{id}/logo	Owner, manager	Upload a logo; returns processed preview
DELETE /businesses/{id}/logo	Owner, manager	Remove the logo
PUT /businesses/{id}/hero	Owner, manager	Set the hero image (still pictures only)
POST /businesses/{id}/media	Owner, manager	Add a carousel picture or video
PATCH /businesses/{id}/media/{mediaId}	Owner, manager	Alt text, caption, order
DELETE /businesses/{id}/media/{mediaId}	Owner, manager	Remove
GET /businesses/{id}/media/{mediaId}/status	Owner, manager	Upload and processing status
PUT /businesses/{id}/links	Owner, manager	Reel link and social links (pending approval)
PUT /businesses/{id}/opening-hours	Owner, manager	Save weekly and special hours; live on save
PATCH /businesses/{id}/customer-connections	Owner, manager	Chat and booking switches
GET /public/businesses/{id}	Anyone	Public profile, with empty items omitted

Team

Method and path	Roles	Purpose
GET /businesses/{id}/team	Owner, manager, staff	Team overview
POST /businesses/{id}/team/resolve	Owner, manager	Body: My ID token or user ID; returns display name, username and picture
POST /businesses/{id}/team	Owner, manager	Body: userId, role; creates an invitation
PATCH /businesses/{id}/team/{memberId}	Owner, manager (staff only)	Change role
DELETE /businesses/{id}/team/{memberId}	Owner, manager (staff only)	Remove
POST /businesses/{id}/team/{memberId}/resend and /cancel	Owner, manager	Manage invitations
GET /me/team-invitations, POST /me/team-invitations/{id}/accept or /decline	Member	Respond to an invitation

Events and event staff

Method and path	Roles	Purpose
GET /businesses/{id}/events?q=&status=&when=upcoming or past	Owner, manager, staff	Event list with search; past events flagged
POST /businesses/{id}/events	Owner, manager	Create an event (goes to moderation)
GET /events/{eventId}/attendees?q=	Owner, manager, event management	RSVPs and ticket holders

Method and path	Roles	Purpose
GET and POST /events/{eventId}/staff, PATCH and DELETE /events/{eventId}/staff/{staffId}	Owner, manager	Event staff and roles
GET /events/{eventId}/messages?q=&from=&to=	Owner, manager, staff, event management	Event messages

Ticket sales, the scanner and the live count use the endpoints in the ticketing spec, with the role names in section 2 mapped to the spec's roles.

Listings and messages

Method and path	Roles	Purpose
GET /businesses/{id}/listings?q=&from=&to=&status=	Owner, manager, staff	Listing list with search by name or date
GET /businesses/{id}/listings/pending	Owner, manager, staff	Pending approvals
GET /businesses/{id}/inbox?type=chat or event or listing&q=&from=&to=	Owner, manager, staff	One inbox with filters
POST /messages/{id}/reply, /handled, /report	Owner, manager, staff	Reply, mark handled, report
POST /businesses/{id}/blocked-members	Owner, manager	Block a member from messaging
GET /businesses/{id}/activity?from=&to=	Owner, manager	Activity view (suggested)

10. Acceptance criteria

Edit profile

- [ ] The owner can add, change and remove a logo. A wide, tall or square logo is shown whole, never cropped or stretched, on a transparent background.
- [ ] Logos under 256 px, SVG and animated files are refused with a clear message, and the recommended size is shown beside the upload.

- [ ] Tapping "Profile % complete" opens the first section with a missing item and highlights the first missing field.
- [ ] The hero image refuses video files. The carousel accepts pictures and videos.
- [ ] Uploaded pictures and videos are resized and shaped automatically, with a status shown for each item, and nothing goes live before moderator approval.
- [ ] The reel explainer states that the reel shows above Promotions and social links show at the bottom, and the public page follows it.
- [ ] A Save opening hours button at the bottom of the section saves weekly and special hours, which show on the public page at once and appear in the audit log with before and after.
- [ ] The words "Not listed in this preview" appear nowhere, and any phone, email, website or address not provided is not shown at all on the public page or the owner preview.
- [ ] The chat and bookings switches hide or show the Message and Book buttons, and existing conversations and bookings are not lost.
- [ ] Changes to approval fields show "Pending review", the old version stays live, and a decline shows its reason.

Team and roles

- [ ] The team overview lists usernames and roles with Edit and Remove where the viewer's role allows.
- [ ] A person can be added by scanning their My ID QR or typing their user ID, must accept, and gets no access before accepting.
- [ ] A manager cannot add, edit or remove another manager, and nobody can change their own role or remove the owner.
- [ ] Staff cannot edit the profile, add team members or create events.

Events

- [ ] The event list shows names only, is searchable, and shows past events greyed out.
- [ ] Ticket sales, RSVPs and attendees, event staff, ticket scanning and event messages are all available per event, to the roles in section 6 and no others.
- [ ] A person with the Door access role can open the scanner and sees giant green ENTER or giant red DECLINED. People without that role are refused on the server.
- [ ] A person can hold several event roles and gets the combined rights, and removing a role takes effect at once.

Listings and messages

- [ ] Listings are searchable by name or date, and show a headline that opens the listing.
- [ ] Pending approvals match the admin desk queue.
- [ ] Listing and event messages are filtered views of one inbox, searchable by date.

Audit and security

- [ ] Every action in section 8, including refused attempts, creates an audit entry that can be found by user ID and date and exported to CSV.
- [ ] A platform admin edit on a business profile needs a reason, is logged, and notifies the owner.
- [ ] Only adult accounts in good standing can be added to a team or event staff.

11. Decisions needed and notes on your original text

Decisions needed

- [ ] Publish rule for each field (section 1). Suggested: approval for text, media, links and contact; live on save for opening hours and switches.
- [ ] Public profile page order (section 4.5).
- [ ] Keep the ticketing spec's extra roles (live count viewer, box office, stats viewer) alongside your five, or drop them (section 2).
- [ ] Scanner wording: ENTER (the spec) or ALLOW (your notes).
- [ ] Chat and booking switches: default off for new businesses?
- [ ] Media limits: 10 carousel items, videos up to 60 seconds and 100 MB, 500 MB per business.
- [ ] Logo: SVG refused in release 1, plain background removal offered.
- [ ] Maximum team size (suggested 25) and invitation expiry (suggested 7 days).

How I read your original text

You wrote	I read it as
"Profile 9090% complete"	Profile 90% complete
"Carrousel media, description"	Carousel media, with a short description under the title
"where the real will be displayed"	where the reel will be displayed
"a button for creative ends"	a Create event button

You wrote	I read it as
"RSV and attendees"	RSVPs and attendees
"Teams and settings card"	the existing Team and settings card
"a safe button"	a Save button
"allow" on a green ticket scan	ENTER, per the ticketing spec (to confirm)

Suggestions I added that you did not ask for

Suggestion	Why
Approval rule per field	Keeps the public profile safe while letting opening hours update instantly
"Pending review" badge and old version stays live	Owners are never left with a blank or half-edited page
